**How to file a FOIA request for NASA Agency records**

A FOIA request for NASA Agency records must include the requester’s name and an email or mailing address, a description of the record(s) being sought, the fee category into which the requester wishes to be placed, and the total amount of fees the requester is willing to pay or justification for a fee waiver (see Fees/Fee Waiver Guidance). It is also helpful to provide a telephone number and email address in case the FOIA office has any questions regarding the request; however, this information is optional when submitting a written request. If a request is submitted online via the NASA FOIA website, the required information must be completed. Do not include a social security number on any correspondence with the FOIA office.

NASA Agency records are decentralized and maintained by various Centers and Offices throughout the country. A member of the public may request an Agency record by mail, facsimile (FAX), electronic mail (e-mail), or by submitting a written request in person to one of the thirteen NASA FOIA Requester Service Center Offices. Contact information for those FOIA offices are available on the website at the previous link. It is preferable, however, that requesters submit their requests online using the “Submit a FOIA request Form” on our website. This form walks requesters through populating the information required to submit a FOIA request, and allows requesters to select the appropriate Center to which the request will be sent. If a requester knows which center maintains the requested information, it is best to send the request directly to that Center; however, when a requester is unable to determine the proper NASA FOIA Office to which to direct a request, the requester may send the request to the NASA HQ FOIA Office. The HQ FOIA Office will forward the request to the Center(s) that it determines will most likely maintain the records that are sought. It is in the interest of the requester to send the request to the office he/she believes has responsibility for the records being sought. A misdirected request may take up to 10 additional working days to re-route to the proper FOIA office.

**How to file a Privacy Act request**

A requester who is making a request for records about himself or herself (a Privacy Act request) must comply with the verification of identity provisions set forth in 14 CFR § 1212.202. If a request pertains to a third party, a requester may receive greater access by submitting one of the following: (1) a notarized authorization signed by the individual who is the subject of the request; (2) a declaration by the individual made in compliance with the requirements set forth in 28 U.S.C. § 1746, authorizing disclosure of the records to the requester; or (3) proof that the individual is deceased (e.g., a copy of a death certificate, a verifiable obituary, etc.).

As an exercise of its administrative discretion, each Center FOIA Officer may require a requester to supply additional information if necessary in order to verify that a particular individual has consented to a third party disclosure. Information will only be released on a case-by-case basis to third party requesters if they have independently provided authorization from the individual who is the subject of the request.
Describing Records Sought

In view of the time limits under 5 U.S.C. § 552(a)(6) for an initial determination on a request for an Agency record, a request must be addressed to an appropriate FOIA office and be clearly identified in the letter as a request for an Agency record under the "Freedom of Information Act." It is also important to conduct some research on NASA’s website or the world wide web before submitting a request in order to provide as much information about the records as possible.

NASA FOIA offices often receive FOIA requests seeking records clearly belonging to other agencies. Thus, it may be helpful to know that NASA’s mission is to pioneer the future in space exploration, scientific discovery and aeronautics research. NASA conducts its work in four principal organizations, called “mission directorates,” discussed below:

1. The Science Mission Directorate (SMD) expands the frontiers of Earth science, heliophysics, planetary science, and astrophysics. Using robotic observatories, explorer craft, ground-based instruments, and a peer-reviewed portfolio of sponsored research, SMD seeks knowledge about our solar system, the farthest reaches of space and time, and our changing Earth. You can learn more about SMD and its programs at https://science.nasa.gov/about-us.

2. The Aeronautics Research Mission Directorate (ARMD) transforms aviation with research to reduce the environmental impact of flight, and improves aircraft and operations efficiency while maintaining safety in increasingly crowded skies. ARMD also generates innovative aviation concepts, tools, and technologies for development and maturation by the aviation community. You can learn more about ARMD and its programs at https://www.nasa.gov/aeroresearch/about-armd.

3. The Space Technology Mission Directorate (STMD) pursues transformational technologies that have a high potential for offsetting future mission risk, reducing cost, and advancing existing capabilities. STMD uses merit-based competition to conduct research and technology development, demonstration, and infusion of these technologies into NASA’s missions and American industry. This mission directorate is being refocused as a new Exploration Research & Technology (ER&T) organization to support exploration as a primary customer. You can learn more about STMD and its programs at https://www.nasa.gov/directorates/spacetech/about_us/index.html.

4. The Human Exploration and Operations Mission Directorate (HEOMD) leads human exploration in and beyond low Earth orbit by developing new transportation systems and performing scientific research to enable sustained and affordable human life outside of Earth. HEOMD also manages space communication and navigation services for the Agency and its international partners. You can learn more about HEOMD and its programs at https://www.nasa.gov/directorates/heo/about.html.

In addition to the above four mission directorates, NASA also has a Mission Support Directorate (MSD) that provides effective and efficient institutional support to enable the successful accomplishment of NASA mission objectives. This unit oversees the critical mission support resources and services across NASA field centers. You can learn more about MSD and its programs at https://www.nasa.gov/msd/aboutus.
It is important to review NASA’s organizational structure to help identify, to the extent possible, a particular program office within one of NASA’s Mission Directorates, Field Offices, and/or Administrator Staff Offices that may maintain the records sought. This can be found at https://www.nasa.gov/about/org_index.html. Additionally, to help identify a particular NASA mission that may be encompassed by the subject of a request, a list of “NASA’s Missions A-Z” is available at https://nasa.gov/missions.

By conducting this research, requesters can provide better descriptions of the records sought to better enable agency personnel who are familiar with the subject area to identify and locate records with a reasonable amount of effort. The details that may assist a FOIA office in identifying the requested records include the particular NASA Centers, program offices, and/or names of officials believed to maintain the records, contract number(s) if the work was completed by a contractor, date ranges or time frames, etc.

If the requester fails to reasonably describe the records sought, the FOIA office shall inform the requester of what additional information is needed or why the request is deficient. The FOIA office will also notify the requester that it will not be able to comply with the FOIA request unless additional information is provided within 20 working days from the date of the letter. If the additional information is not provided within that timeframe, the request will be closed administratively without further notification.

NASA need not comply with a blanket or categorical request (such as “all matters relating to” a general subject) where it is not reasonably feasible to determine what record is sought. NASA will in good faith attempt to identify and locate the record(s) sought and will consult with the requester when necessary and appropriate for that purpose in accordance with our regulations. NASA is not required to create or compile records in response to a FOIA request.

**Request for Contracts**

NASA gets a great number of FOIA requests for contracts. A request for contracts should include the specific NASA contract numbers of interest and a detailed explanation of the documents requested. You may find the associated contract numbers via the Federal Procurement Data System (FPDS), which is accessible from https://www.fpds.gov/fpdsng_cms/. The FPDS allows anyone to register and access records pertaining to all federal agency procurement actions, including the ability to run a variety of reports based on specified criteria.

Requesters seeking contracts awarded by NASA are generally categorized as “commercial use requesters” for fee assessment purposes. Commercial use is defined as any use or purpose that furthers the commercial, trade, or profit interests of the requester. In accordance with NASA’s FOIA Regulation 14 CFR § 1206.507, commercial use requesters pay all fees associated with processing their requests, which include search, review, and duplication fees. A request that does not identify the amount a requester is willing to pay for the associated fees will be placed on hold until the requester agrees to pay said fees. If a requester only states his/her willingness to pay a limited amount for processing the request, and it is for more than one document, then the
requester must state the order in which he/she would like the request for records to be processed. Additionally, the requester may limit the scope of the request to reduce processing fees.

**What NASA Generally Releases:**

- Amounts actually paid by the Government under a contract, such as total contract award amounts and total modification amounts.
- Total option year pricing.
- Explanatory material and headings associated with costs and pricing.
- Names of federal employees and key contractor employees, including their signatures.
- Contractual provisions and clauses authored by NASA.

**What We Generally Withhold:**

- Technical and costs proposals submitted in response to a solicitation (automatically withheld under an Exemption (b)(3) statute);
- Unique ideas, methods, or processes (trade secrets);
- Equipment, materials, processes, or systems that are patented, copyrighted, or contains restricted information; or
- Cost and pricing data that is not already generally known as a part of regular business practices, such as burdened labor rates or G&A rates.
- Plans or submissions submitted by the contractor which are incorporated into the finalized contract.

**FOIA Appeals**

If you deem your response an adverse determination, you may exercise your appeal rights.

§1206.700 How to submit an appeal.

(a) A member of the public who has requested an Agency record in accordance with subpart C of this part, and who has received an initial determination which does not comply fully with the request, may appeal such an adverse initial determination to the Administrator, or, for records as specified in §1206.805, to the Inspector General within 90 days from the date of the initial determination letter.

(b) The appeal must:

1. Be in writing;
2. Be addressed to the Administrator, NASA Headquarters, Executive Secretariat, Washington, DC 20546, or, for records as specified in §1206.805, to the Inspector General, NASA Headquarters, Room 8U71, 300 E Street, SW, Washington, DC 20546;
3. Be identified clearly on the envelope and in the letter as an “Appeal under the Freedom of Information Act;”
(4) Include a copy of the initial request for the Agency record and a copy of the adverse initial determination along with any other correspondence with the FOIA office;

(5) To the extent possible, state the reasons the adverse initial determination should be reversed; and

(6) Be sent to the Administrator or the Inspector General, as appropriate, within 90 days of the date of the initial determination.

(c) An official authorized to make a final determination may waive any of the requirements of paragraph (b) of this section, in which case the time limit for the final determination (see §1206.701(a)) shall run from the date of such waiver.

**NASA Office of Inspector General (OIG)**

FOIA requests for OIG documents are handled independently by the NASA OIG. For more information where to send your request see instructions available at the following: https://oig.nasa.gov/FOIA_requests.html
